SUBJECT INDEX

Adaptive detection of targets in laser speckle noise, 200
Adaptive speckle tracking, coherent, 207
Aperture coherent laser radars, detection efficiency for large-, 74
Arrays in laser radars, holographic beam shaping for optical heterodyne, 185
Atmospheric backscatter, design and calibration of a coherent lidar for measurement of, 66
Atmospheric propagation effects on coherent laser radars, 86
Atmospheric (TEA) CO_2 lasers for coherent infared radar systems, frequency-stabilized transversely excited, 148
Backscatter, design and calibration of a coherent lidar for measurement of atmospheric, 66
Backscatter of transmission cables, laser and millimeter-wave, 212
Beam shaping for optical heterodyne arrays in laser radars, holographic, 185

CO_2 laser radar, experimental studies with a coherent, 100
CO_2 laser radar systems, 57
CO_2 laser radar techniques, electronically scanned coherent, 153
CO_2 laser radar technology, multifunction, 19

SUBJECT INDEX

Adaptive detection of targets in laser speckle noise, 200
Adaptive speckle tracking, coherent, 207
Aperture coherent laser radars, detection efficiency for large-, 74
Arrays in laser radars, holographic beam shaping for optical heterodyne, 185
Atmospheric backscatter, design and calibration of a coherent lidar for measurement of, 66
Atmospheric propagation effects on coherent laser radars, 86
Atmospheric (TEA) CO_2 lasers for coherent infared radar systems, frequency-stabilized transversely excited, 148
Backscatter, design and calibration of a coherent lidar for measurement of atmospheric, 66
Backscatter of transmission cables, laser and millimeter-wave, 212
Beam shaping for optical heterodyne arrays in laser radars, holographic, 185

CO_2 laser radar, experimental studies with a coherent, 100
CO_2 laser radar systems, 57
CO_2 laser radar techniques, electronically scanned coherent, 153
CO_2 laser radar technology, multifunction, 19

CO_2 lasers for coherent infrared radar systems, frequency-stabilized transversely excited atmospheric (TEA), 148
CO_2 lidar for measurements of trace gases and wind velocities, 44
Cables, laser and millimeter-wave backscatter of transmission, 212
Calibration of a coherent lidar for measurement of atmospheric backscatter, design and, 66
Centroid of coherent laser radar target images, on estimation of image signal-to-noise ratio and, 120
Coherent adaptive speckle tracking, 207
Coherent CO_2 laser radar, experimental studies with a, 100
Coherent CO_2 laser radar techniques, electronically scanned, 153
Coherent CO_2 systems, digital processor for, 196
Coherent, infrared Doppler lidar—characteristics and data, National Oceanic and Atmospheric Administration's (NOAA) pulsed, 60
Coherent infrared radar, military applications of, 2
Coherent infrared radar, overview of technology developments in, 12
Coherent infrared radar systems, frequency-stabilized transversely excited atmospheric (TEA) CO_2 lasers for, 148
Coherent infrared radar (WINDSAT), feasibility and design considerations of a global wind sensing, 34
Coherent laser radar target images, on estimation of image signal-to-noise ratio and centroid of, 120
Coherent laser radars, atmospheric propagation effects, 86
Coherent laser radars, detection efficiency for large-aperture, 74
Coherent laser radars, programmable transmitters for, 163
Coherent lidar for measurement of atmospheric backscatter, design and calibration of a, 66
Coherent lidar, transverse velocity measurements using, 140
Coherent vs. noncoherent laser radars, relative merit of, 130

Design and calibration of a coherent lidar for measurement of atmospheric backscatter, 66
Design considerations of a global wind sensing coherent infrared radar (WINDSAT), feasibility and, 34
Detection efficiency for large-aperture coherent laser radars, 74
Detection of targets in laser speckle noise, adaptive, 200
Detectors, theory and status of high performance heterodyne, 174
Digital processor for coherent CO_2 systems, 196
Doppler lidar—characteristics and data, National Oceanic and Atmospheric Administration's (NOAA) pulsed, coherent, infrared, 60

Electronically scanned coherent CO_2 laser radar techniques, 153
Experimental studies with a coherent CO_2 laser radar, 100

Feasibility and design considerations of a global wind sensing coherent infrared radar (WINDSAT), 34
Frequency-stabilized transversely excited atmospheric (TEA) CO_2 lasers for coherent infrared radar systems, 148

Gases and wind velocities, CO_2 lidar for measurements of trace, 44
Global wind sensing coherent infrared radar (WINDSAT), feasibility and design considerations of a, 34

Heterodyne detectors, theory and status of high performance, 174
Heterodyne laser radar performance, 110
High performance heterodyne detectors, theory and status of, 174
Holographic beam shaping for optical heterodyne arrays in laser radars, 185

Image signal-to-noise ratio and centroid of coherent laser radar target images, on estimation of, 120
Infrared Doppler lidar—characteristics and data, National Oceanic and Atmospheric Administration's (NOAA) pulsed, coherent, 60
Infrared radar, military applications of coherent, 2
Infrared radar, overview of technology developments in coherent, 12
Infrared radar systems, frequency-stabilized transversely excited atmospheric (TEA) CO_2 lasers for coherent, 148
Infrared radar (WINDSAT), feasibility and design considerations of a global wind sensing coherent, 34

Large-aperture coherent laser radars, detection efficiency for, 74
Laser and millimeter-wave backscatter of transmission cables, 212
Laser radar, experimental studies with a coherent CO_2, 100
Laser radar performance, heterodyne, 110
Laser radar systems, CO_2, 57
Laser radar target images, on estimation of image signal-to-noise ratio and centroid of coherent, 120
Laser radar techniques, electronically scanned coherent CO_2, 153
Laser radar technology, multifunction CO_2, 19
Laser radars, atmospheric propagation effects on coherent, 86
Laser radars, detection efficiency for large-aperture coherent, 74
Laser radars, holographic beam shaping for optical heterodyne arrays in, 185
Laser radars, programmable transmitters for coherent, 163
Laser radars, relative merit of coherent vs. noncoherent, 130
Laser speckle noise, adaptive detection of targets in, 200
Lasers for coherent infrared radar systems, frequency-stabilized transversely excited atmospheric (TEA) CO_2, 148
Lidar—characteristics and data, National Oceanic and Atmospheric Administration's (NOAA) pulsed, coherent, infrared Doppler, 60
Lidar for measurement of atmospheric backscatter, design and calibration of a coherent, 66
Lidar for measurements of trace gases and wind velocities, CO_2, 44
Lidar, transverse velocity measurements using coherent, 140

Measurements of trace gases and wind velocities, CO_2 lidar, 44
Measurements using coherent lidar, transverse velocity, 140
Military applications of coherent infrared radar, 2
Multifunction CO_2 laser radar technology, 19

National Oceanic and Atmospheric Administration's (NOAA) pulsed, coherent, infrared Doppler lidar—characteristics and data, 60
(NOAA) pulsed, coherent, infrared Doppler lidar—characteristics and data, National Oceanic and Atmospheric Administration's, 60
Noise, adaptive detection of targets in laser speckle, 200
Noncoherent laser radars, relative merit of coherent vs., 130

On estimation of image signal-to-noise ratio and centroid of coherent laser radar target images, 120
Optical heterodyne arrays in laser radars, holographic beam shaping for, 185
Overview of technology developments in coherent infrared radar, 12

Programmable transmitters for coherent laser radars, 163
Propagation effects on coherent laser radars, atmospheric, 86
Pulsed, coherent, infrared Doppler lidar—characteristics and data, National Oceanic and Atmospheric Administration's (NOAA), 60

Radar, experimental studies with a coherent CO_2 laser, 100
Radar, military applications of coherent infrared, 2
Radar, overview of technology developments in coherent infrared, 12
Radar performance, heterodyne laser, 110
Radar systems, CO_2 laser, 57
Radar systems, frequency-stabilized transversely excited atmospheric (TEA) CO_2 lasers for coherent infrared, 148
Radar target images, on estimation of image signal-to-noise ratio and centroid of coherent laser, 120
Radar techniques, electronically scanned coherent CO_2 laser, 153
Radar technology, multifunction CO_2 laser, 19
Radar (WINDSAT), feasibility and design considerations of a global wind sensing coherent infrared, 34
Radars, atmospheric propagation effects on coherent laser, 86
Radars, detection efficiency for large-aperture coherent laser, 74
Radars, holographic beam shaping for optical heterodyne arrays in laser, 185
Radars, programmable transmitters for coherent laser, 163
Radars, relative merit of coherent vs. noncoherent laser, 130
Ratio and centroid of coherent laser radar target images, on estimation of image signal-to-noise, 120
Relative merit of coherent vs. noncoherent laser radars, 130

Scanned coherent CO_2 laser radar techniques, electronically, 153
Sensing coherent infrared radar (WINDSAT), feasibility and design considerations of a global wind, 34

Signal-to-noise ratio and centroid of coherent laser radar target images, on estimation of image, 120
Speckle noise, adaptive detection of targets in laser, 200
Speckle tracking, coherent adaptive, 207

Target images, on estimation of image signal-to-noise ratio and centroid of coherent laser radar, 120
Targets in laser speckle noise, adaptive detection of, 200
Technology developments in coherent infrared radar, overview of, 12
Technology, multifunction CO_2 laser radar, 19
Theory and status of high performance heterodyne detectors, 174
Trace gases and wind velocities, CO_2 lidar for measurements of, 44
Tracking, coherent adaptive speckle, 207
Transmission cables, laser and millimeter-wave backscatter of, 212
Transmitters for coherent laser radars, programmable, 163
Transverse velocity measurements using coherent lidar, 140
Transversely excited atmospheric (TEA) CO_2 lasers for coherent infrared radar systems, frequency-stabilized, 148

Velocities, CO_2 lidar for measurements of trace gases and wind, 44
Velocity measurements using coherent lidar, transverse, 140

Wind sensing coherent infrared radar (WINDSAT), feasibility and design considerations of a global, 34
Wind velocities, CO_2 lidar for measurements of trace gases and, 44
(WINDSAT), feasibility and design considerations of a global wind sensing coherent infrared radar, 34
